The Game

You will join an ongoing game playing against 20 players **in real-time**. The other players will be waiting until you have completed your round, so please be considerate. In each round you choose one of two actions: **A** or **B**. This choice will be played against all other players simultaneously.

You choose one action to play against each player simultaneously. The actions of the **other players in the last round** are shown in the image below.

Point Calculation

Your earnings will be calculated in two parts.

The first is a **payoff** and depends on your and the others' choices. Your choice is the row; the other's choices are the columns. The payoff is the cell in the table corresponding to your and their choice. The total payoff is the sum of all the other players' choices (an example follows).

Other		A	B
You	**A**	6 points	0 points
	B	10 points	0 points

The second is a **bonus** of 4 points. You receive a bonus for every player choosing **B**, *if and only if* you choose **A**.

Other		A	B	**Bonus**
You	**A**	6 points	0 points	+4 points
	B	10 points	0 points	

Note

Conversion rate: 200 points are worth £1.00

Your final earnings—at the end of the game—will be the sum of the showup fee plus the payoff of a randomly chosen round.

Example Round

Other		A	B	Bonus
You	**A**	6 points	0 points	+4 points
	B	10 points	0 points	

8 players chose **A** and 12 chose **B**

If you chose **A**

1. For each player choosing **A** you earn 6 points → 6 points × 8 = 48 points
2. For each player choosing **B** you earn 0 points → 0 points × 12 = 0 points
3. First payoff → 48 points + 0 points = 48 points
4. You chose A, so you get a bonus of 4 points for each **B** → 4 points × 12 = 48 points

Total: 48 points + 48 points = **96 points**

If you chose **B**

1. For each player choosing **A** you earn 10 points → 10 points × 8 = 80 points
2. For each player choosing **B** you earn 0 points → 0 points × 12 = 0 points
3. Since you chose **B**, you do not get a bonus.

Total: 80 points + 0 points = **80 points**

Comprehension Check

Time left to complete this page: **6:50**

Other		A	B	Bonus
You	**A**	6 points	0 points	+4 points
	B	10 points	0 points	

Please answer the following questions.

Q1: In each round, how many actions do you choose?

- 1: A single action against all other players
- 0: None. I don't have to choose.
- 20: 1 for every player.
- 40: 2 for every player.

Q2: In the payoff matrix above. If you choose **B** and 20 players choose **A** what is your payoff?

- 20 × 6 points = 120 points
- 20 × 4 points = 80 points
- 20 × 0 points = 0 points
- 20 × 10 points = 200 points

Q3: What does the colour and letter in the summary figure show?

- Choice of other players in the current round
- Choice of other players in the previous round
- Choice of other players in the next round
- My choices up to now

Q4: Which choice entitles you to get bonus points?

- A
- B
- A and B
- Neither A nor B

Q5: Which of the following statements is correct?

- I get a bonus of 10 points for each player choosing A.
- I get a bonus of 4 points for each player choosing B if I choose A.
- I get a bonus of 4 points for each player choosing A if I choose B.
- I get a bonus of 6 points for each player choosing B if I choose A.

Instructions

In this game, your task is to collect boxes 📦, each worth 1 point. There are 100 boxes in total. By clicking **Start** you collected 1 box per 0.3 second(s).

There is, however, a bomb 💣 hidden in one of the boxes chosen at random. If you collect it, all boxes will be destroyed, and your payoff will be 0. Your task is to choose when to stop collecting, hoping you did not collect the bomb 💣. To stop collecting you may click **Stop** at any time.

After clicking **Stop** you can see if you collected the bomb by clicking **Solve**.

Note: 100 boxes are worth £0.50

Next

Results

You collected 66 boxes. The bomb was in box 36.
Unfortunately you collected the bomb 💣 and lost all 66 boxes.

Debriefing

We would like to ask you a few questions regarding the **first game (choosing A or B)** before we let you go.

Which describes your strategy best?

- ○ I randomly choose between A and B
- ○ I mostly played A (i.e., bonus choice)
- ○ I mostly played B (i.e., no bonus choice)
- ○ I followed the majority
- ○ I followed the minority
- ○ I followed a different strategy

How do you think most of your opponents chose?

- ○ They followed the majority
- ○ They randomly choose between A and B
- ○ They mostly played A
- ○ They mostly played B
- ○ They followed the minority
- ○ They followed a different strategy

In the **A vs B** game you earned: **96 points** from round 5 (chosen at random).
In the **bomb** game you earned: **0 points**.

Game points: 96 points worth **£0.48**
Participation fee: **£0.70**

£0.70 + £0.48 = **£1.18**

You earned £1.18
