

Twin persona summaries matched to revealed public-goods-game behavior

Notes: Panel A reports matched-minus-baseline differences divided by the candidate-uniform SD; error bars are 95% game-cluster bootstrap intervals. Panel B plots, for each fixed game, the number of players against the effective number of top-1 selected players across personas; the dashed line is uniform coverage. Matches are top-k probability-weighted; candidate-uniform baseline averages over players shown in each request.
